

## Biographical Sketch

**Dr. Henry Evrard**

**ICPBR, Shanghai, China**

Dr. Evrard completed his Doctorate in Sciences at the University of Liège, Belgium, with postdocs at Boston University, the Barrow Neurological Institute in Phoenix, and the Max Planck Institute for Biological Cybernetics in Tübingen. He holds his main senior position at the International Center for Primate Brain Research in Shanghai, and additional positions at the Nathan Kline Institute for Psychiatric Research in New York, USA, and the Center for Integrative Neuroscience at the University of Tübingen in Germany. His research concentrates on the peripheral and central nervous pathways of interoception and autonomic control in the context of complex behaviors, involving the co-regulation of brain and bodily states, with implications for the emergence of subjective feelings in humans.
